NAME

MolecularFormula

SYNOPSIS

use MolecularFormula;

use MolecularFormula qw(:all);

DESCRIPTION

MolecularFormula module provides the following functions:

 $\label{lem:calculate} Calculate Elemental Composition, Calculate Exact Mass, Calculate Molecular Weight, Format Composition Infomation, Get Elements And Count, Is Molecular Formula$

FUNCTIONS

CalculateMolecularWeight

```
$MolecularWeight = CalculateMolecularWeight($MolecularFormula);
```

Calculates and returns the molecular weight for a specified MolecularFormula.

CalculateElementalComposition

```
($ElementsRef, $ElementCompositionRef) =
   CalculateElementalComposition($MolecularFormula);
```

Calculates the percent composition in a specified *MolecularFormula* and returns references to arrays containing elements and their percent composition.

CalculateExactMass

```
$ExactMass = CalculateMolecularWeight($MolecularFormula);
```

Calculates and returns the exact mass for a specified MolecularFormula.

Format Composition Info mation

Returns a formatted elemental composition string using references to elements and elemental composition arrays. Precision is an optional parameter; its default value is 2.

GetElementsAndCount

Retrieves elements and their count composition in a specified *MolecularFormula* and returns references to arrays containing elements and their count.

IsMolecularFormula

```
$Status = IsMolecularFormula($MolecularFormula);
($Status, $ErrorMsg) = IsMolecularFormula($MolecularFormula);
```

Returns 1 or 0 a based on whether it's a valid MolecularFormula.
